

RAG Tool Sample Data Explanation

Background

This project aims to assist boutique consulting firms in self-sourcing experts efficiently. Expert sourcing involves identifying and engaging subject matter experts who can provide specialized knowledge, insights, and solutions for various projects.

To streamline this process, organizations categorize experts into profile types based on their experience, industry, and expertise level. Common profile types include industry professionals, academic researchers, consultants, and regulatory specialists, each contributing unique perspectives and value. Screening questions further refine the selection process by assessing qualifications, past projects, problem-solving approaches, and industry-specific knowledge, ensuring alignment with the organization's needs.

Many firms opt to build and maintain their own internal expert databases rather than relying on external sources. Over time, they accumulate extensive networks of internal experts. Our goal is to enhance this process by tagging and recommending stored experts, allowing consultants to quickly retrieve relevant information and connect with the right experts for their projects, ultimately saving time and improving efficiency.

Expert (expert_rows.csv)

ID: Unique identifier for the expert.

Name: Full name of the expert.

OrganizationID: Identifier for the organization sourcing the expert.

ProjectID: Identifier for the project the expert is sourced for.

Favorite: Boolean flag indicating if the expert is marked as a favorite.

Profession: The expert's professional title or role.

Company: The company the expert is associated with most relevant to this project

DepartureTime: Timestamp of when the expert left the company.

Description: Optional general description of the expert, usually taken from the expert network.

FurtherInfo: Additional details about the expert, which cant fit in any of these fields or the screening questions.

Geography: Geographic region where the expert is based.

ProfileTypeID: Identifier for the type of profile the expert has.

SubProfileTypeID: Identifier for a sub-profile-type

Status: Sourced, Scheduling, Scheduled, Completed, or Dismissed.

InternalStatus: Whether the expert has been reviewed.

AIAssessment: AI-generated score assessing the expert's relevance to the project

AIAnalysis: AI-generated analysis to explain the score.

AIRationale: Literal calculation of scores which led to analysis.

PercentEssential: Percent of features marked as essential for the which the expert did well on.

PercentTotal: Same as percent essential, but w/ non-essential.

ExpertNetworkName: Expert network that sourced this expert.

Cost: Cost associated with engaging the expert.

Currency: Currency in which the cost is measured.

AddedExpertByID: ID of the user who added the expert.

DateAddedExpert: Timestamp when the expert was added.

AddedCallByID: ID of the user who got call invite.

DateAddedCall: Timestamp when the call was added.

MeetingStartDate: Scheduled start date of the meeting.

MeetingEndDate: Scheduled end date of the meeting.

PaidStatus: Boolean flag indicating if the expert has been paid.

Rating: Rating assigned to the expert.

LinkedInLink: URL to the expert's LinkedIn profile.

SourceEmailID: Identifier for the source email used to contact the expert.

FinalStatusSourceEmailID: Email ID corresponding to the expert's final status.

FinalCallDateTimeSourceEmailID: Email ID related to the final call scheduling.

FinalTardyToCallSourceEmailID: Email ID linked to the expert being late to a call.

FinalAbsentFromCallSourceEmailID: Email ID linked to the expert missing a call.

Checked: Boolean indicating if the expert's information has been checked by a human.

CheckedTime: Timestamp when the expert was last verified.

CompanySize: Size of the expert's company.

VendorsUsed: Vendors the expert has worked with.

InterviewLead: Lead interviewer for discussions with the expert.

NoteTaker: Person responsible for taking notes during interviews.

PostInterviewRating: Rating given after the interview.

Transcript: Transcript of the expert's interview or call.

AudioFileLink: Link to an audio recording of the interview.

NotesFromCall: Notes taken from a conversation with the expert.

FraudFlag: Boolean indicating if the expert is flagged for fraud.

MetaExpertID: Identifier for a related expert profile.

ProfilePictureLink: Link to the expert's profile picture.

AllowExpertStorage: Integer flag determining if expert storage is permitted.

Email: Email address of the expert.

Phone: Phone number of the expert.

Strikes: Number of strikes against the expert (e.g., missed calls).

LinkedInCreationDate: Date the expert's LinkedIn profile was created.

LinkedInConnectionCount: Number of LinkedIn connections the expert has.

SurveyDuration: Duration of the survey completed by the expert.

TardyToCall: Boolean indicating if the expert was late to a call.

AbsentFromCall: Boolean indicating if the expert missed a call.

ProbabilityOfAIScreeners: AI-generated probability of passing a screening process.

AssignedToID: ID of the person the expert is assigned to.

AbleToSpeakToTopics: Boolean indicating if the expert can discuss assigned topics.

LikelihoodOfReengagement: Score indicating the likelihood of future engagement.

TopicsAbleToSpeakTo: Topics the expert can discuss.

FraudReason: Reason for the fraud flag, if applicable.

EnrichedLinkedIn: Boolean indicating if LinkedIn data was enhanced with additional details.

AIMatchCalculated: Boolean indicating if AI matching was calculated.

Jobs: Expert's employment history as a list of job objects. This is a separate model.

Expert Questions: Expert's answer to screening questions as a list of expert question models. This is a separate model

Jobs (job_rows.csv)

ID: Unique identifier for the job.

ExpertID: Identifier for the expert associated with this job.

ProjectID: Identifier for the project related to this job.

Role: Job role or title of the expert.

Company: Name of the company where the expert held this role.

StartDate: Optional start date of the job.

EndDate: Optional end date of the job.

OrganizationID: Identifier for the organization associated with this job.

SourceEmailID: Identifier for the email that sourced this job entry.

Expert Question (expert_question_rows.csv)

ID: Unique identifier for the expert question.

ExpertID: Identifier for the expert associated with this question.

ProjectID: Identifier for the project related to this question.

Question: The question asked to the expert.

Answer: The expert's response to the question.

OrganizationID: Identifier for the organization associated with this question.

SourceEmailID: Identifier for the email that sourced this question.

PossibilityFraudulent: AI-generated probability that the response is fraudulent.

SourceProjectQuestionID: Identifier for the original project question this was sourced from.

Order: The position/order of the question within a sequence.

AIMatchScore: AI-generated score evaluating the relevance of the expert's answer.

Excluded: Boolean flag indicating whether the question or response has been excluded.

Meta Expert

Notice how most of these fields are able to be taken directly from my expert model, which is why we don't provide sample meta experts.

ID: Unique identifier for the meta-expert.

Name: Full name of the meta-expert.

OrganizationID: Identifier for the organization associated with the meta-expert.

Profession: The expert's professional title or role

Company: The company the expert is associated with.

Description: Optional general description of the meta-expert.

Geography: Geographic region where the meta-expert is based.

LinkedInLink: URL to the expert's LinkedIn profile.

FraudFlag: Boolean flag indicating if the expert is marked for fraud concerns.

ProfilePictureLink: URL to the expert's profile picture.

Email: Email address of the meta-expert.

Phone: Phone number of the meta-expert.

Strikes: Number of strikes against the expert (e.g., missed calls, issues).

LinkedInCreationDate: Date when the expert's LinkedIn profile was created.

LinkedInConnectionCount: Number of LinkedIn connections the expert has.

Organization: The associated organization entity

Tags: AI-generated categorical associations with the expert across fields like company, industry, seniority, role name, conversation Topics (what they can speak to), and geography. This is for our current, basic expert filtering.

Reviews: User-written reviews, based on the quality of the expert conversation.

Expert Tags

As these are fields under my meta expert model, I also didn't provide these. These should likely be generated by the RAG tool you develop (or replace with an alternative method you suggest).

ID: Unique identifier

Tag: Topic or field the expert should be tagged with representing an area of expertise and helping to summarize and label the expert's knowledge

Category: The category the tag pertains to. Most often, these will be company, industry, seniority, role, conversation topics, and geography.

Reviews

Again, since it's under the meta expert model, it wasn't included. Also, reviews in general are easily synthesized.

ID: Unique identifier

Review: Integer scoring expert out of 10 for quality

Comment: User submitted summary of quality for the expert to explain their review

UserID: The ID of user who submitted this review

Example Output from Proxycurl

This is the service that allows us to download LinkedIn profiles. Below is an example of everything we can get with just a LinkedIn link.
